

Agri-Mag

3-0-12 6% Sulfur and 12% Magnesium

New Product Introduction

An all-new magnesium product that fits growers' standard practices better than other alternatives. *Sulfate of Potash-Magnesia (SPM)* has been a preferred source of water-soluble magnesium for a long time. One complaint though is that in order to get the magnesium you want, you must apply more sulfur than you care for or need. SPM has twice as much sulfur as it does magnesium with an analysis of 22% Potassium, 22% Sulfur and 11% Magnesium. The sulfur to magnesium ratio is not aligned with most crops needs.

Agri-Mag has just the opposite ratio, with twice as much magnesium as it does sulfur plus it offers much needed nitrogen. The analysis of **Agri-Mag** includes 3% Nitrogen, 12% Potassium, 12% Magnesium and only 6% Sulfur.

Typical nutrient recommendations reflect the following needs for sulfur and magnesium.

Crop	S lbs./acre	Mg lbs./acre	Agri-Mag lbs./acre
Corn	25	36	300
Soybeans	15	24	200
Dry Beans	10	36	300
Sugar Beets	25	48	400
Wheat	15	24	200

Blend with Potash to supply all of your crops potassium, sulfur and magnesium needs, plus get the added benefit of nitrogen.

An example for use in soybeans might look like the following:

Product	Rate/Acre	N	P	K	S	Mg
Potash	100 lbs. =			61		
Agri-Mag	200 lbs. =	6		24	12	24
	300 lbs. =	6		85	12	24
