

## Water-Soluble EZ20 Essential Zinc Increases Yields

**New research out of The University of Kentucky demonstrates** a significant economic advantage to the grower who ensures the optimal amount of Zinc in their soil. Research conducted in 2009 by Dr. Greg Schwab, using Agrium Advanced Technologies' Ultra Yield **EZ20 Essential Zinc**, a 70% water-soluble zinc, **showed nearly 70 bu/acre increase in corn yield** versus adding no zinc.

### Zinc is an Essential Nutrient

Deficient soil (Mehlich III soil test Zn <1)

### Increase Your Growers' Profits

Encourage your growers to soil sample, ensuring nutrient management programs meet recommended levels for all essential nutrients. And when they need secondary nutrients and micronutrients, use UltraYield branded products, which provide a highly water-soluble nutrient source, with lower analysis to ensure even distribution.

**The benefits of EZ20 Essential Zinc are clear!**
